I. Current situation II. Road for the future

01

Research

COVID'ization of research
Increasingly demanding, grant-
focused environment vs. open science

'A winner-take-all hyper-competitiveness discourages cooperation,
encourages poor scientific practices and deters new talent from entering the field'

Put the "Ph" Back in PhD, Arturo Casadevall, 2015

Would you recommend a career in scientific research to your younger self?

Yes
47%

I don't know
29%

No

CAREER NEWS | 30 August 2022

Lab leaders wrestle with paucity of postdocs

Even high-profile scientists are struggling to recruit qualified postdoctoral researchers.

Where is the road for future?

- Less publish-or-perish pace
- Greater internal connection between researchers
- Effective and durable collaborations
- Collective approaches for doing science

Isabelle Stengers

Another Science is Possible

A Manifesto for Slow Science

02

Training

New educational tools, incredible free sources vs. exposition to huge knowledge but limited 'guidance & selection & time'
Soft skills training???

Where is the road for future?

There is a tremendous amount of data and info

Both professionals, educators and students have to take their responsibility on life-long learning

03

Supervision

Digital & accessible supervision vs. limitations of in-person contact

Where is the road for future?

Upsurge in student anxiety

Which skills do you feel you're lacking in?

Uncertain prospects for postdoctoral researchers
Nature 588, 181-184 (2020)
 doi:
<https://doi.org/10.1038/d41586-020-03381-3>

Where is the road for future?

1. **Epistemology.** How do we know what we know? How do we go from making an association to establishing causation?
2. **Quantitative skills.** The ability to code would give our students many more opportunities in the age of information revolution.
3. **Ethics.** How do you spot the ethical dilemmas and try to work with society before they become problems?

Bosch G, Casadevall A. 2017. Graduate biomedical science education needs a new philosophy. <https://doi.org/10.1128/mBio.01539-17>.

QUOTE OF THE DAY

“I know that whatever my lab can contribute to the world, it’s a sliver compared to the totality of what my mentees will contribute to the world.”

Chemist Carolyn Bertozzi appreciates that her Nobel prize will also put the spotlight on the students and postdocs she has mentored. ([Stanford University video](#) | 3 minute watch)

Tips for PhD students

I think that to be a PhD is very charismatic!

I will be a great professor!

I love to read and interpret

I want to earn good money!

I will set up my own company!

I want to make ground-breaking research

I want to understand the world better

I'm a total lab rat

PhD = Researcher

People Who Don't Give Up

PhD does not have = researcher

Research

Independent Investigator

Biotechnology

Business & Intellectual property

Biotech startup
Venture capital
Patent

Government & Social programs

Science policy and regulation
Education
Funding
Global and public health

Education & Communication

Teaching and education
Administration
Journalism
Information media
Editor

Short Term

- Reflect! Reflect Reflect!
- Turn your research skills on yourself
- Take the responsibility

Short Term

- Take advantage of teaching & mentoring opportunities in your department
- If this is not possible, ask your supervisor if you can shadow them for a few classes
- Become involved in (attend / present) journal clubs, seminars in other departments,
- Cultivate multiple mentoring relationships

Short Term

- At FEBS Congresses, do not miss:
 - Education Plenary
 - Education Sessions
- Encourage yourself and your peers/mentors to present an education poster at coming conferences and FEBS Congresses

Short Term

- Post, visit, promote the FEBS Network Educator Channel (Free resources & Tips & Networking)
- Create Google alerts for educational keywords
- Try to follow-up educational research as well

Mid Term

- Volunteer teaching at science museums, high schools...
- Apply to work as a teaching assistant at summer schools of universities
- Ask neighbouring universities if they're looking for someone to teach

Mid Term

- Interact with your society's education group and its activities!
- Attend education seminars, workshops, etc. (many bursaries available)

Long Term

- Balance between teaching & research!
- Work on your teaching portfolio:
 - Teaching statement (philosophy)
 - Teaching experiences
- Mentor high school/undergrad students

Long Term

- Recognize good education policies and create more awareness of the importance of education and educational research among life scientists

 **Nathan C. Hall** @prof_nch · Jul 24, 2018

If you could go back and tell your younger academic self one thing you've learned about academia, what would you say?

Dr B @Dr GP PhD · Jul 24, 2018

Simon Hix
@simonjhix

You'll end up having a bigger impact on the world through your teaching than your research. Take teaching seriously, and be good to your students. It will pay you back in the end

I miss most since my (semi) retirement. The interaction was always a learning experience for me, if not them! 🙄

Thanks
